If you enjoyed the game, you might appreciate some insights into its development process. Development took much time, money and effort. The game is not the end product, it is a step in a longer story. So your choices and your decisions will influence the next steps of the story. The game was developed in Delphi XE and then ported to Delphi Prism and XE8. In some places, I also used Direct2D (SDL) for 2D rendering and GDI for the original artwork. The game uses OpenType Arabic for characters, and can be played in three languages: Arabic, English and German. If you have any questions or suggestions, let me know, because I don't know everything myself. Finally, I would like to thank my family, My wife and three children for the support and the patience they have given me during the development. If you would like to support me, you can either donate via PayPal or buy me a beer. P.S. - The game is not available in stores yet. But I will let you know when it is available. - If you want to find out more, I invite you to a German speaking live stream on Discord. I will also write a blog-post about it. The game is available for free for download via torrent. It also features a demo of 15 minutes. The demo also includes a copy of the game data. After downloading and running it, the game will be able to be played (thanks to the emulators). The game is available for free for download via torrent. It also features a demo of 15 minutes. Power Link VR is a port of Robotry! for the HTC Vive. The original game was developed and is 100% complete, but it required a Unity SDK which wasn't available for the Vive at the time. The Power Link is a simple adapter that allows the Vive to do all the things Steam Controller does, as well as a lot more. It's the cheapest, most accessible way to get into Robotry! VR. For more information, visit: Credits : Robotry! is developed by ReFlect Studios, aka Funmagnet. The HUB in the single player mode and multiplayer games is designed by J.Ken Smith. Vive La Resistance - the Vive VR Arcade - is an exciting, immersive and incredibly fun 3D arcade action platform shooter with a steampunk art style and fast paced gameplay. The game takes full advantage of the Vive controller's twin triggers to deliver maximum intensity in the head-to-head, one-to-one dogfight gameplay, the new positional tracking using the controllers, and the Vive tracker. Players pilot customisable ships in order to blast enemies off the map, collect upgrades, collectibles and unlock additional story modes. Explore the Solar System: Atmos is a puzzle-based game in which players guide an ever-growing swarm of atmospheric micrometeoroids through the solar system to safely deposit them on the planet of their choosing, much like a space shuttle taking off. Along the way, players must overcome challenging puzzles and hazards to release the asteroids for maximum effect, while avoiding hazards and collecting bonus energy orbs for special abilities. The game features 60 missions on 3 difficulty levels and over 20 different swarms, each containing thousands of micrometeoroids to direct and control. As missions complete, players unlock special achievements, enabling the discovery of more swarms. Online leaderboards keep track of your position in the solar system, while the in-game tutorial and mission guidance system is based on open-source material from NASA and the European Space Agency, providing a deep understanding of the game's physics and intricate balancing of player options. Watch Dogs Legion - Hack the system, unite the resistance: Live a new kind of life in a cyber-punk world under the shadow of an authoritarian government. As Marcus Holloway, a former Systems Analyst for the recently disbanded CERT Division of the City of New York, you are an outlaw in the shadows. With access to cutting-edge technology and the ability to enforce the law by hacking into city systems, you will be able to play a pivotal role in the resistance movement of the game's near-future setting, with your hacks quietly breaking through the masses in order to contribute to freedom. Craft the perfect revolution: In a system divided by the ruling administration, you'll help fuel the resistance, working in tandem with the growing movement of all those who see a brighter future with no more authoritative rule and no more oppression. Built from the ground up: As the owner of a unique urban paradise, you are the benevolent caretaker of Arcadia City. In your territory, freedom and prosperity reign—the first and last pillars of your existence, now twisted into

What's new in Power Link VR:

: 10 games that have a place in the Oculus Quest library With the advent of the Oculus Quest, the PC environment of the past (cough, Doom!) is not going away any time soon. At the VRX West show last weekend, many Rift owners were expressed frustration that their Quest was effectively just being held by them at the airport. Many Rift owners would like to game on Quest as well, even if they're not necessarily willing or able to own a PC. There are a few games that offer support for both the Quest and Rift. Virtual Desktop Sleeve for Quest is one such game that offers such support, but does little to add polish to the game in the Quest version. More generally however, we'd like to see more standalone games come to the Quest library. There are a number of games that could be made great with Quest's minimal horsepower, and they certainly have a place in the Oculus Quest library. **Adventure Time: Magic Man's Head Games** In Adventure Time: Magic Man's Head Games, you play as Finn the Human, and must solve a number of puzzles in order to put out a number of fires. Finn is placed in front of numerous puzzles, and must figure out which puzzle features which creature, and how to solve the puzzle to release the creature from their cell. Finn interacts with the surroundings through A-B buttons or by dragging objects in the environment. Essentially, Magic Man's Head Games is a Metroidvania game with a distinct Adventure Time flavor. The puzzles are varied and made for a thoughtful, especially for casual VR, solution. There is some replay value as Finn can access the earlier puzzles if he solves later puzzles with the correct objects. Magic Man's Head Games is a great title for exploration and puzzles. However, Magic Man's Head Games does really poorly on translating its mechanics to a VR experience. Instead of navigating puzzles with A-B buttons and searching for interactive objects, the game has you simply front facing each puzzle, with Finn trapped in front of the puzzle. As Finn is nearsighted (presumably for comedic effect), it can be somewhat difficult to tell what puzzle features which creature and how to solve it. The party system in Magic Man's Head Games makes it a lot more difficult to simply "flick" a creature from their cell in order to get them the correct object to put out

a fire. It doesn'
